

The menu bar at the top of MultiLogger looks really strange?

This problem usually occurs in older Win95 machines due to an outdated component in the operating system that is responsible for making the toolbar work. This component, comctl32.dll can be updated by downloading and running the following utility from Microsoft:

[50COMUPD.EXE](#)

(<http://www.microsoft.com/downloads/release.asp?ReleaseID=11916>)

Contact Canary Systems if you continue to have problems after attempting this update.
